

TURN-KEY GAS SYSTEM FOR BLUE CHIP METALS COMPANY

BACKGROUND

Client needed reliable gas supply infrastructure for their new multi-billion dollar plant in Brandenburg, Kentucky.

The plant needed direct access to the interstate pipeline markets. Gas demand was too large for and the timeline was too aggressive for utility level services.

The new gas system needed to be in service in under seven months.

SOLUTION

Greylock Midstream provided the necessary capital to connect the client's plant directly to the interstate pipeline. We took on the full scope to design, construct and upgrade the system.

Greylock owns and operates the system and is responsible for all compliance, maintenance, and repairs. We also provide all end-user services, including pressure reduction, heating, and odorization, to ensure the natural gas is transported safely and efficiently.

RESULTS

Greylock successfully connected the new multi-billion dollar plant directly to the interstate pipeline within the aggressive timeline of under seven months.

The client now powers its operations with natural gas, resulting in significant cost savings and a more environmentally friendly solution.
